

Understanding What ADSL Plans- Dynamic vs Static IP

Dynamic vs Static IP

Dynamic – IP Address Changes

Static – IP Address is permanent (needed for web hosting)

Our plans have the following suffixes

DS DE SS SE which reflect –

DS = Dynamic Shaped

DE = Dynamic Flexible

SS = Static Shaped

SE = Static Flexible

These refer to the plan's combination of Static or Dynamic IP coupled with Shaped or Flexible download usage

Example:

Customer calls requesting a 512K plan.

He wants a flat rate & doesn't need a Static IP. And believes 10 gig would suit his download requirements

You will select the Plan Code for this Plan in CRM as:

512 Easy DS
